

USEFUL INFORMATION AND FAQ'S

IS IT PERMANENT?

Laser Hair Removal is the only treatment that offers permanent reduction of unwanted hair. Razors, waxing, threading and tweezing all guarantee that the hair will grow back. Statistics show as much as 95% of the hair targeted by a course of Laser Hair Treatments is permanently removed.

WHY IS LASER BETTER THAN IPL?

Lasers use the exact wavelength needed to effectively treat the hair in each pulse. Lasers can be used for large areas and offer virtually pain free rapid results. CALVEO will customise the laser settings to each clients specific skin tone and hair colour to achieve superior results.

IS IT PAINFUL?

Pain varies between each individual, however most of our clients feel very little to no pain or discomfort. Laser Hair Removal has been statistically proven to be less painful than waxing and electrolysis. The Lumenis laser we use has two hand pieces; the Chilltip and vacuum making it one of the most versatile and comfortable lasers available.

IS IT SAFE?

CALVEO have invested in world leading laser technology working with the Gold Standard Lumenis LightSheer Desire. The equipment has undergone extensive clinical trials securing optimum safety and efficiency, complete with pre set parameters.

All Laser Practitioners at CALVEO are qualified to the highest NVQ Level 4 with Core of Knowledge. We work with a dedicated Laser Safety Professional to ensure safety guidelines and working best practice are adhered to.

WHY SHOULD I HAVE LASER HAIR REMOVAL?

Laser Hair Removal is cost and time effective! Gain time in the morning and evening by not having to worry about picking up a razor.

Improve your confidence for holidays, weddings and more.

Less hassle and no more shaving rash, stubble or ingrowing hair.

IS IT RIGHT FOR ME?

The following list can restrict or prevent a client from having Laser Hair Removal. Should you have any queries please contact us:

- White/Grey Hairs
- Under 18's
- Pregnancy

- Dysplastic Nevi (in the area to be treated)
- Anti-Depressants
- Acne Medications
- Epilepsy
- Heart Disease (Consent required from your GP)
- Diabetes (Consent required from your GP)

POLYCYSTIC OVARY SYNDROME (PCOS)

Laser hair removal is a great option for PCOS, dramatically reducing excessive hair growth and improving self confidence. CALVEO offer a tailored payment package for women who have PCOS. We initially recommend a course of 6/8 treatments followed by a maintenance treatment every 3/4 months.

WHEN WILL I SEE RESULTS?

A minimum course of 6 treatments is normally required for permanent hair reduction, you should start to see a reduction in hair regrowth after the second or third treatment.

We are always happy to help, and should you have any concerns our team can be contacted directly at contactus@calveo.co.uk or 01572 490950.
